Specifications:

Pulling Iron shall be a model PI-U1, as manufactured by Pennsylvania Insert Corp, Spring City, PA. Pulling iron shall be manufactured from 7-strand 1/2" stress relieved carbon steel cable designed specifically for concrete applications. The ultimate strength of the cable shall be 270 kips. The exposed portion of the pulling iron shall have a EMT protective sheath covering the strand cable. The ends of the pulling iron shall have plastic protective caps. Uncoated pulling irons will corrode and therefore shall not be used for constant lifting or pulling cable after initial installation. Safe working load varies with application. (See supplemental installation instructions for weight capacity guidelines.)
